

FORGED

VS.

Cavity Back

Which irons are right for you?

More Consistent Feel

A forged iron's weight is more centered on the clubface which provides better feel for players consistently striking in the center of the club.

Latest Technology

Cavity back irons utilize the latest technology to provide a very forgiving and rewarding experience.

Solid Construction

Each iron is made from a piece of solid steel which is molded by machines to create each iron.

use forged irons

Easier to Hit

A cavity back iron has its weight distributed around the outside, leaving a cavity in the middle. This makes it easier to hit for beginners and casual golfers who often mis-hit shots.
